Use tomorrow's technology today

High-speed high-precision control that adapts itself to mechanical characteristics

Maximized to the best advantage for the machinery

Mitsubishi Electric servo systems are globally renowned and respected. Offering a perfect combination of high-end performance and ease of use, they are now found in a huge range of applications throughout all branches of industry – from single and multiple axis systems in mechanical engineering and other metal-working sectors to complex, fully-synchronised solutions in the semiconductor and motor industries.

Manufactured at the highest standards

Mitsubishi automation products enjoy a global reputation for outstanding quality and reliability. The process starts at the design stage, where quality is designed into even the smallest components. Our systematic pursuit of "best practice" means that Mitsubishi products readily comply with product directives and global standards.

Meeting global norms and standards

Mitsubishi Electric's servo amplifiers and motors meet all the standards and specifications laid down in the EU Low Voltage Directive 73/23/EEC and the Machinery Directive 98/37/EC. Needless to say, all systems carry the CE mark and are certified as conforming to UL, cUL and GOST.

What makes a good servo system

Cost effectiveness

Industry leading performance gives faster production cycles and reduced material wastage

Plug and play

The availability of pre-made cables of different length means that connecting a servo motor to an amplifier or any other combination is quick and error free.

Simple networking

High-speed servo and motion applications need special high-speed networking. Mitsubishi's Sevo System Controller Network (SSCNET III) provides these system capabilities.

Advanced and evolving tuning functions

The built-in display panel indicates servo amplifier status and alarm numbers.

Automatic servo motor recognition

Absolute high-resolution encoder as standard equipment

High speed, high performance
Motion Bus system SSCNET III

Position and speed data,
etc. can be set via CC-Link
communication.

CC-Link compatible built-in
positioning function

USB interface for convenient
and fast setup with a PC

Simple setup and tuning

The new setup software MR Configurator
allows for easy set up and tuning the servo
system with a personal computer.

Functionality

The MR-J3 series has incorporated
advanced control capabilities, that are able
to maximize the best advantage from the
machinery.

Compact & flexible

Mitsubishi's servo systems are both compact
and flexible. The reduced component
size means more flexibility for installation
and reduced enclosure sizes.

The right solution every time

A diverse product range helps you make the right product choice.

"Plug & play" technology

A solution for every application

Mitsubishi Electric always has the right servo system for straightforward and complex applications alike. With so many motor types, different amplifier output performances and features, the right servo solution is available for every conceivable positioning requirement.

The new MR J3 series is Mitsubishi Electric's latest generation of servo amplifiers and motors for industrial automation applications, that are small, precise and easy to integrate, supporting a host of new features.

The powerful amplifiers and motors are significantly smaller than previous generations, reducing the need for costly cubicle space and allowing the motors to fit easily and neatly into small recesses of the machine. From simple single-axis drives for point-to-point positioning, to complex systems with 96 fully synchronised axes, the new MR-J3 series can reduce more than just your stress levels.

The ever-evolving new generation servo

Handling systems require exceptional precision and dynamic response.

Plug and play minimises wiring errors and speeds up installation

Powerful amplifiers

The new MR-J3 generation of servo drives delivers state-of-the-art technology and simple operation in a very compact package. New functions like the advanced vibration suppression system and the further improved real-time autotuning ensure maximum precision, very short positioning times and simple installation.

Mitsubishi offers a wide spectrum of servo amplifiers to meet the demands of all types of applications. The MR-J3-A models are suitable for drive systems with conventional control and are designed for regulating speed, torque and position control tasks. The MR-J3-B models are specified for complex, multi-axis movement sequences and for use in networked automation systems. The MR-J3-T series is a compact and cost effective servo solution with integrated positioning control functionality and CC-Link communications capability.

The units configure themselves by Plug & Play for Mitsubishi Electric's motion control and positioning control systems, to which they are connected via the high-speed optical SSCNET III network, which has a cycle period of just 0.44 milliseconds.

The MR-J3 is currently available with outputs from 50 W to 55 kW. Units with higher outputs are being added to the range at regular intervals.

Integrated positioning

This CC-Link enabled version of Mitsubishi Electric's latest generation of servo amplifiers makes it easier than ever to build truly integrated automation systems. The powerful amplifier and motors are significantly smaller than previous generations, reducing the need for costly cubicle space and allowing the motors to fit easily and neatly into small recesses of the machine.

MR-J3 Servos at a glance

Power range

MR-J3-A/B:	0.1–37 kW
MR-J3-BS:	0.1–37 kW
MR-J3-A4/B4:	0.6–110 kW
MR-J3-BS4:	0.6–55 kW
MR-J3-T/T4:	0.1–55 kW
MR-E-A/AG:	0.1–2 kW

Input

MR-J3-A/B/BS/T and MR-E-A/AG:	200–230 V AC (50/60 Hz)
MR-J3-A4/B4/BS4/T4:	380–480 V AC (50/60 Hz)

Safe Torque Off (STO)
Safe Stop1 (SS1) (only with MR-J3-D05)

Safety option card

MR-J3-D05

The power to perform

Bottle filling with increased productivity by decreased cycle times thanks to short settling time.

Increased response speed

The MR-J3's 2100 Hz speed-frequency response rate is over 70 % faster than existing models. For users this means faster operation, greater precision, faster retooling in production, less wastage and better product quality.

Reduced component size

The reduced component size is critically important to machine designers who are often called upon to squeeze all of the control solutions they need into the smallest deliverable package. The MR-J3 series boasts an intelligent design that has reduced amplifier sizes by up to 40 % and motor lengths by almost a quarter. This means machine designers don't have to make as many compromises to get the right motor and deliver the right power in the right place. These servos' compact dimensions enable flexible installation and economical design, which helps you to keep your costs down and be more competitive in the global economy.

Intelligent functions for any application

Every detail of the MR-J3 series is designed for performance and reliability, from the intelligent drive electronics to the robust mechanical components. These next-generation servo systems are both compact and flexible, featuring Plug & Play functionality, fibre-optics technology and optical feedback systems.

High speed response of 2100 Hz offers shortest settling times resulting in short cycle times.

Firmware that delivers performance

All MR-J3 servo amplifiers use the very latest regulation and control technologies. These systems ensure fast installation and setup and make it possible to configure stable systems with very short response times – no matter what's your application.

■ Real-Time Auto-tuning

The real-time auto-tuning function sets the servo's control parameters automatically, eliminating the need to calibrate the system for each individual application. But that's not all – auto-tuning also works continuously while the system is in operation, making constant adjustments to cater for applications with fluctuating moments of inertia. This makes it possible to use these servos in a much wider range of applications.

Precise tuning functions

■ Advanced suppression of mechanical vibration

Advanced vibration suppress control is designed to suppress the vibrations in Category 2 and above. It is effective in suppressing residual vibrations at the time of settling during positioning operation.

The primary control method of the MR-J3 is Model Adaptive Control. In this method, the motor is driven in such a manner that the tip of the given machinery moves together with the reference model applied.

In applications with extreme load vibrations this function significantly improves both performance and system response.

Under Advanced vibration suppress control, it uses a mechanical vibration model from reference model to generate a drive pattern that prevents the tip of machinery from vibrating, thereby suppressing any residual vibration. Advanced vibration suppress control can extract vibration components from actual motor movements. It identifies the vibration characteristics of the machinery in real time, and automatically makes adjustment to the mechanical vibration model.

■ Adaptive filtering

The optimum machine resonance suppression filter is automatically set to suppress resonance without even measuring the machine system's (drive shaft) frequency characteristics. The adaptive frequency range has been increased compared to the prior models, so resonance at the drive shaft can also be suppressed.

Adaptive filter (upper figure) to suppress drive shaft vibrations such as in a ball screw

When a given machine has a mechanical resonance at a high frequency (in the range of several hundred Hz and above), increased control gain will cause the control system to oscillate in this vibration mode and subsequently lose control. In order to overcome the mechanical resonance, it is common practice to insert a machine resonance suppression filter into the control loop to prevent oscillation. Adaptive filter II is a function that automatically sets this machine resonance suppression filter in real time.

SSCNET III – The benchmark standard

In addition to conventional pulse train positioning, the MR-J3 series also supports the SSCNET III high-speed motion control network. The SSCNET III is a high-speed synchronous network using an optical fiber cable. The MR-J3-B servo amplifier is connected to a control device with SSCNET III interface (e.g QD75MH positioning module, MR-MQ100/Q170MCPUCPU/Q172D/Q173DCPU Motion Controller or FX3U-20SSC-H interface module). As for the communication specifications of SSCNET III, it can control up to 32 axes per master interface with the transmission rate of 50 Mbps and command communication period of 0.4 ms.

Since long-distance wiring has become possible, it is possible to locate the controller's control panel and drive units far apart and spread widely in a large-scale facility or a large-scale production line. This, in turn, will shorten the cable between amplifier and motor in machines where there is a relatively large amount of wiring.

As for the servo adjustments, a servo setting and support tool, MT Developer2 can be used over SSCNET III, just simply connect a personal computer to the motion controller makes it possible to perform controller settings and servo parameters of all the connected axes to SSCNET III.

Safety first

Maintain machine performance while meeting required safety standards

The safe choice for motion

Mitsubishi's MR-J3 family has become the leading choice for motion applications world wide. Industry leading performance, the SSCNET III motion network, and patented technology like vibration suppression has lead to a significant global installed base. Mitsubishi now takes this success one step further by adding safety functions to the MR-J3 line up with the MR-J3-BSafety amplifier and MR-J3-D05 safety option card.

Standards compliance

The MR-J3 motion safety solution is fully certified by third party accreditation organizations like TÜV. It complies with both EN 13849-1 for machine safety and ISO 61508 for functional safety. Hence specifying this solution in a motion system assists engineering staff to meet the requirements of mandatory certifications such as the EU Machinery Directive (2006/42/EC).

Comprehensive safety functions

Together, these devices offer a comprehensive motion safety solution. Implement safety functions using just the amplifier, or with both units, depending on system requirements. The MR-J3-BSafety amplifier by itself offers a Safe Torque Off (STO) function according to EN 60204-1 that prevents an unexpected re-start. Since STO allows the motor to coast to a halt, if a controlled stop is required, the MR-J3-D05 provides a Safe Stop 1 (SS1) function according to EN 60204-1. An Emergency Off (EMG Off) and Emergency Stop 1 (EMG Stop 1) are also provided by the D05. Hence system designers can select an economical solution that provides only the functions they need.

Maintain safe control of motor behaviour even in emergency situations

Servo motors to add movement

Speed, accuracy and control, whenever you need it.

HF-KP motors – IP65 standard protection

Motor solutions for all

Featuring the most advanced concentrated winding techniques and the latest technology, Mitsubishi servo motors are among the most compact in the market.

Motors are available in a range of options from 50 W to 110 kW in different designs, including specialised motors such as hollow shaft and direct drive motors that suit most application needs.

All Mitsubishi servo motors provide integrated ABS encoders. Additional return-to-origin routines, limit switches, or other sensors are not required.

Moreover, Mitsubishi's low, ultra low and medium inertia designs allow users to select the best motor characteristics for their application.

Advanced features

■ Increased motor speed

MR-J3 motors lead the market, combining speeds of up to 6,000 rpm with high torques. This makes it easier for designers to select the motors they need to meet tough performance criteria.

■ Increased encoder resolution

All MR-J3 encoders are 18 bit, delivering industry-leading 262,144 pulses per revolution. This high resolution makes it possible to detect and suppress mechanical vibrations. The non-volatile absolute encoder system has a backup battery, eliminating the need for time-wasting zero-point calibration routines.

■ Improved motor IP ratings

All MR-J3 motors are IP65 rated as standard (all 400 V motors are IP67). This means that MR-J3 systems can be used in heavy-duty industrial environments.

Linear motors are available optionally.

Plug & play positioning solutions

Using the right positioning solution can help increase the accuracy of the work process, reduce waste and rework as well as provide a higher quality of production.

The MR-J3 series together with SSCNET III support a very broad spectrum of applications with between 2 and 96 axes. Components with a variety of different PLC and positioning systems for a modular and fully-scalable configuration can be combined. This gives the user full control over the system and complete cost transparency, combined with the dependable controller performance of the MELSEC FX series or the MELSEC System Q series with motion controllers.

The range starts from simple pulse train positioning controllers over dedicated motion cards to most complex applications with System Q motion CPUs.

Fast, high-precision positioning

Positioning modules

■ MELSEC FX positioning modules

High-speed counter and single axis positioning modules are available, which can be used in combination with the FX series PLCs. This provides a cost effective solution for small servo/motion applications.

■ SSCNET III connection

The SSCNET module FX3U-20SSC-H can be used in combination with a FX3U PLC to achieve a cost effective solution for high precision, high speed positioning.

■ System Q positioning modules

For a wide range of applications the System Q offers their QD75MH positioning module series – from stand-alone configurations for single-axis tasks to the coordinated movement of up to 4 axes per module.

When MR-J3-B servo amplifiers are used the QD75MH can be connected via the SSCNET III motion control network.

Motion Control and PLC in perfect harmony

Motion control systems have huge potential for optimising production processes and improving product quality. To control these systems, System Q offers solutions ranging from individual motion/positioning cards to advanced motion CPUs capable of synchronised operation across many axes.

System Q's unique design allows users to select and use different combinations of CPUs from the same platform. For example, motion CPUs can be employed independently or in tandem with PLC, PC or process CPUs.

Thanks to the dedicated motion control network SSCNET III, each motion CPU can connect up to 32 servo axes. In addition, three motion CPUs can be used in a single System Q solution to bring advanced motion control to 96 axes.

A whole solution for Motion Control

Apply the MR-MQ100 in a wide variety of motion applications.

Only use what you need

For most applications, a complete control platform of a PLC and motion controller will do the job. However, for smaller systems, this may not address competitive cost pressures. The MR-MQ100 allows a single axis to be completely controlled and synchronised to a separate encoder or virtual axis with no additional controller hardware. Hence applications such as rotary cutters, flying saws and labelling can be economically accomplished without exceeding a tight control budget.

Limit cost, not options

While the MR-MQ100 is an economical solution, this doesn't mean lacking in features. A complete range of essential functions are available, including encoder and virtual axis synchronization, registration, point to point positioning and user defined cam profiles. In addition, the hardware complements these powerful software features with built-in I/O and SSCNET III motion networking capability as well as an Ethernet port.

Reduced wiring

The MR-MQ100 also helps keep system costs down with its use of SSCNET III, Mitsubishi's simple but rugged optical fiber motion network. A single fiber connection is all that's needed to provide full communication and control over all functions of the MR-J3B servo amplifier regardless of capacity. A standard Ethernet connection is also provided to link the MR-MQ100 to the MT Developer2 software.

Fully integrated

The Q170M offers the ability to provide a complete automation solution with a single, compact device. Its main strength is the ability to control up to 16 axes over a single SSCNET connection. However, rather than just being a simple motion controller, a comprehensive PLC capability is also built in. Hence the Q170MCPU offers the ability to address a range of applications such as more sophisticated packaging machinery, labeling and material handling applications.

Flexibility

Most motion systems offer sophisticated axis control functions. However, the Q170MCPU also opens up a huge range of PLC application possibilities by being compatible with over 100 of the System Q I/O modules. This means application challenges such as analogue I/O, high density digital I/O, networking and others can easily be tackled by the Q170MCPU. For companies already using System Q, spare parts will be common to their other systems, reducing cost and administration tasks.

Choose from over 100 System Q I/O modules

Fast, easy system set-up

High performance is less valuable if it's hard to use. The MR-MQ100 and Q170MCPU avoids this with the intuitive MT Developer2 software that replaces abstract programming with graphical models of the actual mechanical system. It's easy to create virtual clutches, gears and cam profiles by simple drag and drop selection.

Program by creating virtual mechanical systems

Servo setting and support software

MR Configurator – a complete engineering environment

The MR Configurator software package makes configuration and diagnostics quick and easy and includes powerful graphical machine analysis and simulation functions. Machine analysis enables determination of the frequency response of the connected drive train without any additional instruments. If necessary, you can then make design changes or install filters to achieve better machine performance. The system can be connected to a personal computer with a standard USB (Universal Serial Bus) port.

Selecting a variety of waveforms is possible in a Graph window.

Monitoring and checking with the diagnostics features

A wide range of automatic configuration assistants make it easy to set up your new servo systems correctly, even for less experienced users. The strong benefits are:

■ Easy set up

MR Configurator allows for easy set up and tuning the servo system with a standard personal computer.

■ Multiple monitor functions

Graphic display functions are provided to display the servo motor status with the input signal triggers, such as the command pulse, droop pulse and speed.

■ Test operations with a personal computer

Test operation of the servo motors can be performed with a personal computer using multiple test mode menus.

■ Advanced functions

Further advanced tuning is possible with the improved advanced functions.

Powerful new functions

■ Selecting a variety of waveforms is now possible

Powerful graph functions with 3 analog channels and 4 digital channels support tuning. User-friendly functions and a diverse waveform selection powerfully support user's work.

The speed-torque characteristic diagram of the motor in operation can be displayed. Since the current operation status can be displayed on the screen, the status of a servo system can be checked in real-time.

■ Improved accuracy

When the Start button is pressed, the servo motor is automatically oscillated, and the machine system's frequency characteristics are displayed.

The frequency characteristics that could previously only be analyzed in a range between 0.1 and 1 kHz can now be analyzed in a range between 0.1 and 4.5 kHz. This can also be used as a tool to comprehend the machine system's characteristics. In addition, data can be overwritten.

Gain search window

■ Improved usability

While automatically fluctuating the gain, the setup software MR Configurator searches for values with the shortest settling time and lowest overshooting or vibration.

Basic setting parameters can be easily set in a selection format. Settings in the list format are also possible.

Horizontal and vertical pillow

System Q is ideal for such applications as programming can be kept simple with the Q CPU logic controller, high accuracy maintained with the Q motion controller easily integrated with an efficient user interface such as the GOT1000. Hence these products are combined into a truly total solution.

■ Phase compensation is the key

The high accuracy demands of this type of machine are not a problem for the Q motion controller and MR-J3 series of servo drives together with SSCNET III servo network. As mentioned with bottle filling, a cam profile can be very easily designed and implemented by using software based tools. In addition to this, the Q motion controller incorporates a phase compensation algorithm which ensures that the encoder phase angle and cam phase angle are precisely in synchronization. In general this means that the packaging cutters can be precisely synchronised with the feed of the conveyor, hence providing an accurate cut at high speed.

Sealing packaging solutions

■ From tubes to pillows

Probably the most common type of packaging machines are the pillow type machines used to package a whole host of products. These machine types are known as "pillow" because of the distinct shape of the packaging film being formed around the product to be packaged. There is often a variance of 2 or 3 specific sealing points which are then cut to individually package the product ready for shipping. The products are fed into the machine in a number of different ways using conveyors, hoppers, rotating arms etc.

The inline feed of the product is synchronised with the film packaging which is fed from the feed roller into a forming station which forms the packaging around the product. The package is then sealed and cut away from the film train, resulting in a completely packaged product ready for boxing or other packaging processes.

Various processes need to be synchronised with this application as it requires a high level of flexibility to cater for a diverse range of shapes and sizes.

Semiconductor fabrication

The exceptionally dynamic performance of the servo motors enables faster handling, increasing the throughput of the entire system.

As processing progresses the wafers get thinner and their diameters simultaneously increase, making them increasingly fragile. The movements executed by the wafer handling drives must thus be fast but very smooth, without any sudden shocks or vibrations. The positioning precision of the axes that move the polishing pads must be very high to prevent unnecessary stresses on the wafers. In addition to this the polishing pads above must be perfectly synchronised with the wafer platens below to meet the exacting specifications of the polishing process. The servo components from Mitsubishi Electric pass all these tests with flying colours.

World wide market challenges with productronic

Today electronic is an important part of our daily life. It helps to make our life more convenient, safe and ensure the energy supply for tomorrow. Faster smaller and cheaper components will lead the trend of penetrating our world even more than today. In order to do so, an enormous pressure for extremely fast development of technology and integration is not only the challenge for the electronic developer but also for the designer of the production facilities. Needless to say that such facilities can be build only with the necessary know how and automation components which are outstanding in performance and quality.

Mitsubishi Electric is the market leader in the area where electronic production is established. As one of the target markets Mitsubishi offers as well the know how as the products for reliable, stable and high efficiency productronic systems.

Chemical mechanical polishing (CMP)

In the sample application shown above Mitsubishi servo motors rotate the polishing pads and wafer platens, and they are also used in the handling devices and the axes that move the polishing pads.

Systems of this kind are installed in clean rooms, which means that the size of the system is a key factor in the total cost of operation (TCO). The Mitsubishi components are so compact that the switchgear cabinet can be integrated in the machine bed, saving valuable space. Quick and easy wiring and an optimum price-performance ratio are added benefits.

Technical Catalogue

More information?

This product catalogue is designed to give an overview of the extensive range of MELSERVO amplifiers and motors. If you cannot find the information you require in this catalogue, there are a number of ways you can get further details on configuration and technical issues, pricing and availability.

For technical issues visit the www.mitsubishi-automation.com website.

Our website provides a simple and fast way of accessing further technical data and up to the minute details on our products and services.

Manuals and catalogues are available in several different languages and can be downloaded for free.

For technical, configuration, pricing and availability issues contact our distributors and partners.

Mitsubishi partners and distributors are only too happy to help answer your technical questions or help with configuration building.

For a list of Mitsubishi partners please see the back of this catalogue or alternatively take a look at the "contact us" section of our website.

About this product catalogue

This catalogue is a guide to the range of products available. For detailed configuration rules, system building, installation and configuration the associated product manuals must be read. You must satisfy yourself that any system you design with the products in this catalogue is fit for purpose, meets your requires and conforms to the product configuration rules as defined in the product manuals.

SERVO AND MOTION SYSTEMS

Mitsubishi Electric offers a variety of Servo and Motion system products providing solutions for applications covering point-to-point and synchronised systems. Systems can be built using a single axis or multi axes, for example when using a System Q Motion CPU solution up to 96 axes can be controlled.

With both standard pulse type output modules and SSCNET bus modules specific application needs are easy to meet.

The Servo motors and amplifiers takes Mitsubishi Motion Control to new levels of precision with a wide range of motors (all MR-ES series motors are fitted with 131072 pulse-per-revolution encoders,

and all MR-J3 series motors are fitted with 262144 pulse-per-revolution encoders) and wide amplifier range (up to 110 kW).

All Mitsubishi Servo and Motion system hardware is complimented by a range of software packages allowing easy programming and set-up of the units.

What are the Components of a Servo System?

Servo motors

Utilising the most advanced concentrated winding techniques and latest technology, these brushless servo motors are among the most compact on the market.

Mitsubishi Servo Motors are made to high standards and offer a wide range of power, speed and inertia ratings providing a motor for

all applications. With a range from 50 W to 110 kW and with specialist motor types (flat "pancake" motors) a complete line-up of products can be offered by Mitsubishi Electric.

Also, all motors in the MR-J3 Series are fitted with absolute encoders as standard. Therefore, an absolute system can be created by simply

providing power to Servo amplifier via a battery. Once this has been done the super capacitor inside the motor and back-up battery allow the Servomotor position to be constantly monitored.

Servo amplifiers

Mitsubishi offers a wide range of Servo amplifiers to meet the demands of all types of applications. From standard digital pulse and analogue controlled amplifiers through to dedicated SSCNET bus type amplifiers, there is a product for all circumstances.

Real Time Adaptive Tuning (RTAT) is a unique Mitsubishi technology, enabling the servo to deliver maximum dynamic performance, even if the load keeps changing, by automatically tuning online (during operation) to the application.

The digital pulse-train and analogue units of the MR-ES and MR-J3 series range from 100 W units through to 110 kW. The SSCNET bus type amplifiers (type B) offer the user ease of connectivity, via SSCNET.

Positioning controllers

For the compact, cost effective, FX range of PLCs, the FX2N-10PG unit provides single-axis control with built-in positioning tables, fast external start and an output pulse rate of up to 1 MHz. The module FX3U-20SSC-H is a positioning module for the MR-J3-B series. This module provides a quick and easy, but efficient positioning control system for simpler applications.

For larger, more complex applications the new powerful Qn PLC range offers three QD75 series modules (one, two and four axes).

These are: open-collector output type (QD75P series), Differential output type (QD75D series) and SSCNET III bus type (QD75MH series). Using the SSCNET system can provide much improved, easier to use positioning systems, with reduced wiring and better noise immunity. All QD75 series controllers can provide functionality such as interpolation and speed-position operation etc.

Motion Controllers

For specialist applications requiring the highest level of control and precision, the dynamic servo technology provided by the Q-Motion CPU is combined with the powerful processing power of the Q series PLC CPU, creating a completely new generation of motion controller products. This fully integrated and flexible system has the capability to control up to 96 axes using SSCNET, which is more than capable for handling any motion application.

MELSERVO MR-J3 Servo Amplifiers

MELSERVO

The MR-J3 servo drive systems from Mitsubishi Electric combine extremely dynamic response with ultra-fast positioning. In addition the servo amplifiers are also very simple to use and their advanced functionality make it possible to achieve maximum performance very quickly, even for users without special experience in calibrating drive applications. The significantly improved auto-tuning function reduces the need for the time-consuming trial-and-error approach. In combination with the setup software package (MR Configurator) the MR-J3 series can be used to detect application mechanical critical frequencies. This enables notch filters to be set to avoid resonant frequencies enabling vibration-free operation.

When using amplifiers of competitors the controller response level has to be reduced for the entire operation range.

The MR-J3 servo amplifiers can be used for global applications with superb operation in the toughest environments.

Features

- High-performance CPU
- Integrated Positioning Functions (MR-J3-T only)
- Adaptive vibration suppression control function for compensation for resonance up to two resonance frequencies
- Advanced vibration suppression control for compensation of motion overshoot
- Separate wiring of the control power supply
- High responsiveness
- Real-Time Auto-Tuning (RTAT)
- Torque control function (MR-J3-A/B)
- Servo-lock anti-vibration function
- RS-422/USB personal computer interface
- Automatic motor recognition
- Network capability
- Complies with global industrial standards
- Integrated safety functions (MR-J3-BSafety only)

Differences Between the Four MELSERVO Servo Amplifier Series

MR-J3-A (standard type)

The MR-J3-A series is ideal for servo applications using conventional control systems. The servo amplifiers have two analog inputs and numerous digital inputs for activating internal application functions (i.e. pulse train positioning). Using the digital pulse train method eliminates the problems inherent in analog control, such as offset shifts caused by temperature fluctuations and drifting when the system is at rest.

The MR-J3-A series can be used in torque, speed or position control mode.

Highlights

- 2 analog inputs
- 1 digital pulse train input
- 7 preset speeds
- Supports three different types of pulse train signals: standard encoder signals (line driver or open collector); pulse and direction; pulse train for right and left rotation

MR-J3-B (SSCNET III bus type)

The MR-J3-B series supports connection to Mitsubishi motion control and positioning control systems. The drive systems are connected to these controllers via SSCNET III, a high-speed motion control enabling high precision synchronization and advanced interpolation. The minimum cycle time of just 0.44 ms increases responsiveness and reduces tact cycle of machine due to fast data exchange. Setting up this plug-and-play network couldn't be easier; you just have to select the axis address and connect the preconfigured bus cable, which also makes wiring errors impossible.

Highlights

- Plug-and-play SSCNET III network
- Motor brake can be controlled directly by the amplifier

- Emulated encoder outputs for connection of conventional slave drive systems
- Amplifier replacement is fast and simple because data management is performed by superior controller.
- Automatic position detection on power-up thanks to absolute position detection system (multi-turn absolute positioning is realised by optional back-up battery)
- MR-J3-BSafety only: Safety functions according to EN IEC 61800-5-2: Safe Torque Off (STO) and additionally with safety option card MR-J3-D05 Safe Stop 1 (SS1)

MR-J3-T (integrated positioning type)

The MR-J3-T series is a compact and cost effective servo solution with integrated positioning control functionality and CC-Link communications capability. By setting position and speed data by using simple point tables in the servo amplifier, positioning operation is possible with a simple start signal from the positioning controller which is input by any standard controller.

It is possible to store up to 256 position steps in the amplifier. The positioning tasks can be started by simply inputting digital signals.

Highlights

- Position and speed data, etc. can be set via CC-Link or RS422 communication
- CC-Link interface can be also used for transmitting positioning data to the amplifier without using the internal point table. Hence centralised data management inside of a machine control can be realised, too.
- Positioning by serial communication (RS-422) for simple applications without fieldbus interfaces
- Parameter unit, MR-PRU03 (optional), makes parameter setting and operation monitoring easier

MR-E Super (general purpose type)

The servo system MR-E Super can perform operation in different control modes, e.g. position/internal speed control. It fits a wide range of applications such as precision positioning and smooth speed control of machine tools and general industrial machines (e.g. packaging, processing or labelling machines).

External analog speed command or torque command are implemented to use this servo system for applications in which speed or torque has to be smoothly controlled.

Up to 1 Mpps high-speed pulse train is used to control the speed and direction of the motor and execute precision positioning also taking advantage of the high encoder revolution of 131072 pulses/rev.

Highlights

- The compact dimensions enable flexible installation and economical design
- With an output range of 100 W–2 kW the system is suitable for any kind of application
- The system allows high accuracy positioning thanks to the integrated high resolution encoder (131072 pls/rev)
- It is a well-priced product for cost-effective and economical servo solutions
- Auto-tuning and diagnostic tools are available for easy and time-saving installation

Overview of MR-J3 Features

Compliant and Safe

Complies with global industrial standards

The entire product range can be used in confidence knowing it is in conformity with overseas industrial standards.

An EMC filter (optional) is available for complying with European EMC directives. Effective EMC is only ensured if the suitable filter is selected for the particular system and installed in accordance with the Mitsubishi EMC recommendations. The MELSERVO MR-J3 devices comply with all important standards (CE, UL and cUL).

Enhanced ability to withstand environmental hazards

The HF-SP motor series are equipped with IP67 as standard enhancing their ability to withstand environmental hazards.

The HF-MP and HF-KP series meet IP65 standard protection.

Separate wiring for the control power supply

The control power supply of the servo amplifier is wired separately, ensuring diagnostics and maintenance without connecting all power connecting cables.

Compact and flexible

More compact servo motors

Mitsubishi servo motors keep getting smaller:

- Ultra low-inertia HF-MP series
- Ultra low-inertia HC-RP series (increased capacity)
- Low-inertia HF-KP/HF-JP series
- Medium-inertia HF-SP series

A wide variety of motors

A broad line-up of servo motors is available. Users can choose the motor series that best suits the needs of the application.

Fully Equipped

Absolute detection as standard

The MR-J3 can be easily set to absolute system, which requires no return to home, by merely adding a battery to the servo amplifier and without changing the servo motor.

Dynamic brake function

With an integrated dynamic brake, the servo motor can be stopped quickly in a power failure, emergency case or when an alarm has been triggered.

Integrated regenerative resistor

A brake resistor is already integrated in standard amplifiers, eliminating the need for external optional brake resistors or brake units.

Control signal assignment feature (MR-J3-A)

Control signals necessary for operation can be freely assigned to control terminals within a predetermined range, enabling more flexible operation.

Personal computer interface is standard

The MR-J3 comes with an integrated USB interface as standard equipment, enabling users to connect a personal computer to the MR-J3 to perform setup diagnostics and maintenance by MR Configurator.

This powerful software tool contains numerous support functions for optimising and analysing the servo system:

- Software oscilloscope
- Machine analyser for detecting mechanical resonance points
- Control signal monitoring
- Encoder and servo system diagnostics
- Versatile test functions
- Gain search wizard for manual tuning and many further useful functionalities

Special Features

Model adaptive control

As the MR-J3 operates in quick response to commands, it offers highly responsive and stable operation, unaffected by machine systems.

Automatic servo motor recognition

Once the encoder cable has been connected, the servo amplifier can determine, as soon as its power is turned ON, which servo motor is connected.

When the servo amplifier detects a mismatch, an alarm is triggered, eliminating the possibility of an error and the need for setting parameters.

Encoder serial communications

The encoder uses serial communications, so there are fewer signal wires to connect.

Real-Time Auto-Tuning (RTAT)

The servo performs automatic gain adjustments even when the load changes.

Safety functions (STO, SS1)

The servo amplifier MR-J3-BSafety has integrated Safe Torque OFF (STO). When the option card MR-J3-D05 is used, further safety features such as Safe Stop1 (SS1), Emergency OFF and Emergency STOP can be achieved. Complying with the standards EN13849-1 for machine safety and ISO 61508 for functional safety, these products assist OEMs and system integrators to meet the requirements of the new Machinery Directive EWG 2006/42/EG. The new directive takes effect from December 29th 2009.

Control Functions with Enhanced Tuning Technology

Real-Time Auto-Tuning (RTAT) and Model Adaptive Control

The powerful Auto Tuning function automatically and periodically adjusts all parameters of position, speed and current controller in the background during operation.

The controller concept is unique due to separate control loops for compensation of control deviations caused by disturbances

or changing command values. Therefore manual controller adjustment is not required.

Adaptive Vibration Suppression and Mechanical Resonance Suppression Function

Mechanical constructions often have inherent resonance points in an upper frequency range of several hundred Hertz. Increased control gain settings of servo controller loops can cause unstable operation due to generation of oscillations and vibrations.

The automatic compensation of mechanical resonances is realised by a so-called Adaptive Filter II. This filter is implemented as a notch filter, detects resonance frequencies and reduces the controller settings (gains) within a certain band width of the resonance point.

(Machine resonance characteristics)

(Machine resonance suppression filter characteristics)

Advanced Vibration Suppression

Advanced Vibration Suppression control is designed to eliminate residual vibrations at the settling time during positioning operation.

The basic control method is to use a mechanical vibration model from command model in order to generate a motion pattern that prevent large overshoot during settling time of positioning operation and so avoid any vibrations.

4	400 V type

Code	Electromagnetic brake
—	None
B	●

All motors conform to the following standards:
CE, UL, cUL

Example: HF-SP 70 2 4B = Medium inertia type with medium capacity; 7 kW; 2000 rpm; 400 V; with electromagnetic brake

General note:

The above tables show the motor model name break-down. Not all combinations are possible. Please refer to the motor specifications table on page 13ff

Servo Motor Features and Typical Applications

Absolute high-resolution encoder as standard equipment

Inclusion of an absolute position detection system eliminates the need for a homing sequence, approximate DOG and other sensors, helping to reduce time and enhance reliability. With these motors high performance and safety at low speed is ensured.

With Mitsubishi's original absolute mode, an absolute system can be configured using conventional I/O even with pulse-train control.

Overview

Model designation	Features	Application example
K 	Low inertia Larger motor inertia moment makes this unit well suited for machines with fluctuating load inertia moment or machines with low rigidity such as conveyors.	- Conveyors - Food preparation machinery - Printers - Small loaders and unloaders - Small robots and component assembly devices - Small X-Y tables - Small press feeders  Small robots
M 	Ultra low inertia Small motor inertia moment makes this unit well suited for high-dynamic positioning operations with extra small cycle times.	- Inserters, mounters, bonders - Printed board hole openers - In-circuit testers - Label printers - Knitting and embroidery machinery - Ultra-small robots and robot tips  Inserters, mounters, bonders
S 	Medium inertia Stable control is performed from low to high speeds, enabling this unit to handle a wide range of applications (e.g. direct connection to ball screw components).	- Conveyor machinery - Specialised machinery - Robots - Loaders and unloaders - Winders and tension devices - Turrets - X-Y tables - Test devices  Winders and tension devices
R 	Low inertia A compact sized low-inertia moment model with medium capacity. Well suited for high-frequency operation.	- Roll feeders - Loaders and unloaders - High-frequency conveyor machinery  Wrapping machinery
J 	Low Inertia (400 V) A 400 V Servo Motor for the MELSERVO-J3 Series for a power range up to 5 kW with low inertia and high speed. It has a compact size, is equipped with high resolution encoder and is compatible to global standards.	- Food and Packaging - Printing machine - Pick up robot for Injection molding machine - Palletizing machine - General machine which require High speed and High frequency

Note: Other types of motors are available on request.

Servo Motor Specifications and Matching Amplifiers

The possible combinations of servo amplifiers and servo motors are listed in the table below.

Details of the braked version motors is given on page 22. The detailed specifications of all servo motors are listed on the following pages.

Order information	(without brake)	Art. no.	210940	213081	213082	213083

- ① The power facility capacity varies depending on the power supply's impedance.
- ② The regenerative braking frequency shown is the permissible frequency for decelerating a stand-alone motor from rated rpm to a stop. When under load, however, the value becomes the table value divided by (m+1) where m is the load inertia moment divided by the motor inertia moment. When the rated rpm is exceeded, the regenerative brake frequency is inversely proportional to the square of (operating speed/rated speed). When the operating speed varies frequently or when regeneration is constant (as with vertical feeds), find the regeneration heat generated (W) while operating. The heat should not exceed the tolerable regenerative power (W). Refer to the section "OPTIONS AND PERIPHERAL EQUIPMENT" in this catalog for details on the tolerable regenerative power (W). Optimal regenerative resistor varies for each system. Select the most suitable regenerative resistor by using the capacity selection software.
- ③ The regenerative braking frequency of the 600 W or smaller servo amplifier may fluctuate due to the affect of the power voltage since the energy charged by the electrolytic capacitor in the servo amplifier is large.
- ④ There are no limits on regeneration frequency as long as the effective torque is within the rated torque range. However, the load/motor of inertia moment ratio must be 15 times or less.
- ⑤ Contact Mitsubishi if the load/motor of inertia moment ratio exceeds the value in the table.
- ⑥ For servo motors with electromagnetic brake please refer to page 22.
- ⑦ The shaft-through portion and connector for cable terminal are excluded.
- ⑧ The vibration direction is shown in the right-side diagram. The numeric value indicates the maximum value of the component (commonly the bracket in the opposite direction of the motor shaft). Fretting of the bearing occurs easily when the motor stops, so maintain vibration at approximately one-half of the allowable value.

HF-KE Series Servo Motor Torque Characteristics

Order information	(without brake)	Art. no.	161507	160211	161508	161509	161510

① The power facility capacity varies depending on the power supply's impedance.

② The regenerative braking frequency shown is the permissible frequency for decelerating a stand-alone motor from rated rpm to a stop. When under load, however, the value becomes the table value divided by (m+1) where m is the load inertia moment divided by the motor inertia moment. When the rated rpm is exceeded, the regenerative brake frequency is inversely proportional to the square of (operating speed/rated speed). When the operating speed varies frequently or when regeneration is constant (as with vertical feeds), find the regeneration heat generated (W) while operating. The heat should not exceed the tolerable regenerative power (W). Refer to the section "OPTIONS AND PERIPHERAL EQUIPMENT" in this catalog for details on the tolerable regenerative power (W). Optimal regenerative resistor varies for each system. Select the most suitable regenerative resistor by using the capacity selection software.

(a)/(b) When a motor decelerates to a stop from the rated speed, the regenerative frequency will not be limited if the effective torque is within the rated torque range. When a motor decelerates to a stop from the maximum speed, the regenerative frequency will not be limited if the load inertia moment is (a) 26-fold (b) 15-fold or less and the effective torque is within the rated torque range.

③ Please contact Mitsubishi if the load/motor of inertia moment ratio exceeds the value in the table

④ The shaft-through portion is excluded.

⑤ The vibration direction is shown in the right side diagram. The numeric value indicates the maximum value of the component (commonly the bracket on the antiload side).

Fretting of the bearing occurs easily when the motor stops, so please maintain vibration to approximately one-half the allowable value.

⑥ For servo motors with electromagnetic brake please refer to page 22.

HF-KP Series Servo Motor Torque Characteristics

Notes:

1. — : For 3-phase 200 V AC or 1-phase 230 V AC.

- ① The power facility capacity varies depending on the power supply's impedance.
- ② The regenerative braking frequency shown is the permissible frequency for decelerating a stand-alone motor from rated rpm to a stop. When under load, however, the value becomes the table value divided by (m+1) where m is the load inertia moment divided by the motor inertia moment. When the rated rpm is exceeded, the regenerative brake frequency is inversely proportional to the square of (operating speed/rated speed). When the operating speed varies frequently or when regeneration is constant (as with vertical feeds), find the regeneration heat generated (W) while operating. The heat should not exceed the tolerable regenerative power (W). Refer to the section "OPTIONS AND PERIPHERAL EQUIPMENT" in this catalog for details on the tolerable regenerative power (W). Optimal regenerative resistor varies for each system. Select the most suitable regenerative resistor by using the capacity selection software.
- ③ Please contact Mitsubishi if the load/motor of inertia moment ratio exceeds the value in the table.
- ④ The shaft-through portion is excluded.
- ⑤ The vibration direction is shown in the right side diagram. The numeric value indicates the maximum value of the component (commonly the bracket on the antiload side). Fretting of the bearing occurs easily when the motor stops, so please maintain vibration to approximately one-half the allowable value.
- ⑥ For servo motors with electromagnetic brake please refer to page 22.
- ⑦ The maximum torque of the HF-JP534(B)–HF-JP5034(B) motors can be increased from 300 % to 400 % by increasing the amplifier capacity by one rank.
- ⑧ The item has longer delivery time. Please contact your Mitsubishi representative.

① The power facility capacity varies depending on the power supply's impedance.

② The regenerative braking frequency shown is the permissible frequency for decelerating a stand-alone motor from rated rpm to a stop. When under load, however, the value becomes the table value divided by (m+1) where m is the load inertia moment divided by the motor inertia moment. When the rated rpm is exceeded, the regenerative brake frequency is inversely proportional to the square of (operating speed/rated speed). When the operating speed varies frequently or when regeneration is constant (as with vertical feeds), find the regeneration heat generated (W) while operating. The heat should not exceed the tolerable regenerative power (W). Refer to the section "OPTIONS AND PERIPHERAL EQUIPMENT" in this catalog for details on the tolerable regenerative power (W). Optimal regenerative resistor varies for each system. Select the most suitable regenerative resistor by using the capacity selection software.

③ Please contact Mitsubishi if the load/motor of inertia moment ratio exceeds the value in the table.

④ The shaft-through portion is excluded.

⑤ The vibration direction is shown in the right side diagram. The numeric value indicates the maximum value of the component (commonly the bracket on the antiload side). Fretting of the bearing occurs easily when the motor stops, so please maintain vibration to approximately one-half the allowable value.

⑥ For servo motors with electromagnetic brake please refer to page 22.

⑦ The value is applicable when the external regenerative resistors, GRZG400-□□□ (standard accessory) are used with cooling fans (2 units of 92x92mm, minimum air flow: 1.0 m³/min). Note that change in parameter No. PA02 is required.

⑧ The item has longer delivery time. Please contact your Mitsubishi representative.

HA-LP Series Servo Motor Torque Characteristics

Notes:

1. — : For 3-phase 400 V AC.
2. — : For 3-phase 380 V AC.

Braked Motor Specifications

For applications requiring the motor shaft to be held in position (e.g. vertical lift applications), all offered motors are available with an electro-

magnetic brake. The wide variety of servo motors allows the user to choose a motor, which suits best according to the task.

MR-ES Servo Amplifier Specifications

The servo amplifier of the series ME-E Super combines unique functions with very compact dimensions. With its high positioning accuracy and high responsiveness the MR-E Super is suitable for applications from 100 W to 2 kW. Available functions of the drive are e.g. position/internal speed control mode, speed/torque control mode and Mitsubishi's well known real-time auto-tuning. The compact size helps designers, to fit all control components needed for an automation system into the smallest space.

For a fast, easy and secure wiring all connectors are located on the front of the servo amplifier. The powerful software package SETUP154E makes set up and diagnostics of the system quick and comfortable.

MR-J3 Servo Amplifier Specifications (200 V Type)

The **MR-J3-A** are general purpose servo amplifiers with analog inputs and pulse train interface as a standard. The range covers 100 W units (MR-J3-10A) up to 7 kW (MR-J3-700A).

The **MR-J3-B** (SSCNET III bus type) servo amplifiers are designed for use with the Mitsubishi motion controllers of the MELSEC System Q series. The motion controllers and servo amplifiers can be linked via the high speed SSCNET III network.

Connecting the amplifiers to SSCNET III guarantees reliable operation and eliminates the need for complex wiring.

The range also covers 100 W units (MR-J3-10B) up to 7 kW (MR-J3-700B). MR-J3-A/B servo amplifiers of increased capacity (up to 37 kW) are available on request only.

MR-J3 Servo Amplifier Specifications (400 V Type)

Mitsubishi's 400 V range of servo amplifiers provides the same industry leading functionality as the 200 V range.

The 400 V servo amplifiers are available over a wide range from 600 W rating to the very powerful 110 kW rating.

Suitable for all types of automation solutions, the 400 V servo amplifiers also provide sink/source logic selectability.

For amplifiers larger than 22 kW please contact your nearest Mitsubishi representative. MR-J3-A/B servo amplifiers of increased capacity (up to 110 kW) are available on request only.

MR-J3-BSafety Servo Amplifier Specifications (200 V Type)

The MR-J3-BSafety servo amplifiers offer among the standard functions of the MR-J3-B, additional safety functions for a comprehensive protection of machinery and workers. In combination with the Safety Option Card MR-J3-D05, these devices represent a perfect safety solution. MR-J3-BSafety and MR-J3-D05 are certified according IEC/EN 61508 SIL 2, EN 62061 SIL CL2 and EN ISO 13849-1 PL d (Category 3).

The servo amplifier MR-J3-BSafety itself offers the Safety function "Safe Torque Off" (STO) according EN 61800-5-2.

This "Safe Torque Off" function disconnects the power from the motor and prevents an unexpected re-start. Thereupon the motor coasts to a halt. Compared to the traditional technology with contactors, this integrated Safety function reduces the effort in hardware, wiring and maintenance and offers higher performance and lifetime.

Response time	8 ms or less for Safe Torque Off (STO)

MR-J3-BSafety Servo Amplifier Specifications (400 V Type)

Mitsubishi's 400 V range of safety servo amplifiers provides the same industry leading functionality as the 200 V range. The 400 V safety servo amplifiers are available over a wide range from 600 W rating to the powerful 7 kW rating. Suitable for all types of automation solutions, the 400 V safety servo amplifiers also

provide sink/source logic selectability, safety functions and can be connected to the Safety Option Card MR-J3-D05. For amplifiers larger than 7 kW please contact your nearest Mitsubishi office.

Common specifications MR-J3-BSafety		60BS4	100BS4	200BS4	350BS4	500BS4	700BS4	11KBS4	15KBS4	22KBS4

Response time	8 ms or less for Safe Torque Off (STO)

MR-J3-D05 Safety Logic Unit

The function of the Safety Option Card MR-J3-D05 can be compared with a programmable Safety relay. In combination with MR-J3-BSafety additional Safety functions according EN 61800-5-2 and additional Emergency Stop functions according EN IEC 60204-1 are available. Among "Safe Torque Off" (STO) also "Safe Stop" (SS1) is possible.

With SS1 the connected motor will be stopped "by control" in a fixed time. When the minimum speed is reached, the Safety function STO will be activated preventing the re-start of the motor by disconnecting the motor power supply.

Emergency Stop functions like EMG OFF (Emergency Off) and EMG STOP (Emergency Stop) according EN IEC 60204-1 can be realised with an appropriate wiring. One unit of MR-J3-D05 supports save operation of 2 axes.

Common specifications		MR-J3-D05
Control power supply	voltage /frequency	24 V DC
	permissible voltage fluctuation	24 V DC 10 %
	power supply capacity	500 mA ^① ^②
Connectable axes		2 axes, independently controlled
Shut-off input (Safety devices)		4 points (2 points x 2 axis), source/sink logic compatible
Shut-off release input (restart devices)		2 points (1 points x 2 axis), source/sink logic compatible
Response time		20 ms or less for Safe Torque Off (STO)
Delay time setting		0 s, 1.4 s, 2.8 s, 9.8 s, 30.8 s, w2 % (additional for axis A: 5.6 s)
Environment	ambient temperature	Operation: 0–55 °C (no freezing), storage: –20–65 °C (no freezing)
	ambient humidity	Operation: 90 % RH or less (no condensation), storage: 90 % RH or less (no condensation)
	atmosphere	Inside control panel; no corrosive gas, no flammable gas, no oil mist, no dust
	elevation	1000 m or less above sea level
oscillation		5.9 m/s ² or less at 10 to 55Hz (directions of X, Y and Z axes)
Weight		kg 0.15
Dimensions (WxHxD)		mm 22.5x192x86
Order information		Art. no. 227486

^① Inrush current of approximately 1.5mA flow instantaneously when turning the control power supply on. Select an appropriate power supply considering the inrush current.

^② Number of turning the power on is 100000.

MR-J3-T Servo Amplifier Specifications

The MR-J3-T servo amplifiers are a further development of MR-J3-A. In addition to the features of the MELSERVO series these amplifiers have an integrated positioning controller for one axis.

Point to point positioning operation can be performed just by setting position data (target positions), servo motor speeds, and acceleration/deceleration time constant, etc. in the point tables as if setting them in parameters. An additional highlight of the servo amplifier MR-J3-T is the **"turret function"**. Main focus of this function is positioning on different stations, which are equally placed on a circle. Typical applications are:

- Tool changer
- Rotary table systems

CC-Link interface can be also used for transmitting positioning data to the amplifier without using the internal point table. Hence centralised data management inside of a machine control can be realised, too.

For simple servo application without any fieldbus components internal point table entries can be activated by serial RS-422 communication.

The table below provides an overview of all the MR-J3-T servo amplifiers and their special features.

MR-J3-T (200 V type)		10T	20T	40T	60T	70T	100T	200T	350T	500T	700T

MR-J3-T General specifications	
Interface power supply	24 V DC ± 10 % (required current capacity: 150 mA) ^③
Control system	Sine-wave PWM control, current control system
Dynamic brake	Built-in ^④
Protective functions	Overcurrent shut-off, regenerative overvoltage shut-off, overload shut-off (electronic thermal relay), servo motor overheat protection, encoder error protection, regenerative brake error protection, undervoltage, instantaneous power failure protection, overspeed protection, excessive error protection
Cooling/protection	MR-J3-10T–60T; MR-J3-60T4–MR-J3-100T4: Self-cooling, open (IP00); MR-J3-70T–700T, MR-J3-200T4–700T4: Fan cooling, open (IP00)
Environment	ambient temperature ^⑤
	Operation: 0–55 °C (no freezing), storage: –20–65 °C (no freezing)
	ambient humidity
	Operation: 90 % RH max. (no condensation), storage: 90 % RH max. (no condensation)
vibration	atmosphere
	Inside control panel; no corrosive gas, no flammable gas, no oil mist, no dust
	elevation
	1000 m or less above sea level
	vibration
	5.9 m/s ² (0.6 G) max.

^① Rated output capacity and rated rotation speed of the servo motor used in combination with the servo amplifier are as indicated when using the power voltage and frequency listed. Torque and speed cannot be guaranteed when the power supply voltage is less than specified.

^② Optimal brake resistor varies for each system. Select the most suitable regenerative resistor by using the capacity selection software.

^③ 150 mA is the value when all of the input/output points are used. The current capacity can be stepped down according to the number of input/output points in use. Refer to the MR-J3 servo instruction manual for details.

^④ Special specification models without a dynamic brake are available on request.

^⑤ The MR-J3-350T or smaller servo amplifier can be installed closely. In this case, keep the ambient temperature within 0 to 40 °C or use the servo amplifier with 75 % or less of the effective load rate.

^⑥ The amplifier built-in resistor is compatible with the maximum torque deceleration when the motor is used within the rated speed and the recommended load/motor inertia moment ratio.

^⑦ The item has longer delivery time. Please contact your Mitsubishi representative.

^⑧ 0.8 A is the value when all of the input/output points are used. The current capacity can be stepped down according to the number of input/output points in use. Refer to "MR-J3-MT MR-J3-D01 SERVO AMPLIFIER INSTRUCTION MANUAL" for details.

^⑨ A 24 VDC power supply for input/output signals can be shared by the servo amplifier and MR-J3-D01. In this case, secure the power supply capacity corresponding to the points of the input/output signals to be used.

Overview of MR-J3-T Commands and Operation Modes

Servo amplifier model MR-J3-T

Command interface		CC-Link communication (Ver.1.10), DIO command (extension IO unit MR-J3-D01 is required) or RS-422 communication
Command control	Remote register	Possible with CC-Link communication when 2 stations are occupied. Position command input: position command data is set with the remote register; Feed length input setting range at 1 point: ± 1 [μm] to ± 999.999 [mm]; Speed command input: speed command data (rotating speed) is set with the remote register.
	Point table no. input	Possible with CC-Link communication, DIO command or RS-422 communication. CC-Link communication (when 1 station occupied): 31 points; CC-Link communication (when 2 stations occupied): 255 points; DIO command: 255 points (extension IO unit MR-J3-D01 is required.); RS-422 communication: 255 points; Position command input: selects from the point table; Feed length input setting range at 1 point: ± 1 [μm] to ± 999.999 [mm]; Speed command input: selects speed and acceleration/deceleration time constant from the point table.
	Station position command input	Possible with CC-Link communication, DIO command or RS-422 communication. CC-Link communication (when 1 station occupied): 31 stations; CC-Link communication (when 2 stations occupied): 255 stations; DIO command: 255 stations (extension IO unit MR-J3-D01 is required.); RS-422 communication: 255 stations
	Speed command input with remote register	Possible with CC-Link communication when 2 stations occupied. Sets speed command data (rotating speed) with the remote register.
	Speed command input with speed no. input	Selects speed and acceleration/deceleration time constant from the point table.
Automatic operation mode	Point table	Point table no. input or point table data input system. Each positioning operation based on position and speed data. Speed changing operation (2 to 255 speeds). Automatic continuous positioning operation (2 to 255 points). Roll feed display is selectable. Clearing droop pulses with the clear (CR) signal is settable.
	Rotating direction specified	Positions to the specified station. Rotating direction is settable.
	Shortest rotating direction	Positions to the specified station. Shorter rotating direction from the current point is selected.
Manual operation mode	JOG operation	Inches upon contact input, CC-Link communication or RS-422 communication based on speed data set by a parameter
	Index JOG operation	Rotates in a direction specified by rotating direction evaluation when the start signal (ST1) turns ON. Positions to a nearest station where deceleration to a stop is possible when the start signal (ST1) turns OFF.
	Manual pulse generator	Manual feed with the manual pulse generator. Command pulse multiplication: 1, 10, 100 is selectable with parameter
Manual home position return mode	DOG type	Home position return is made starting with Z-phase pulse after passage of proximity dog. Home position address may be set. Direction for return to home position selectable. Home position shift amount and home position address settable. Automatic retreat on dog back to home position and automatic stroke retreat function.
	Count type	Home position return is made by counting encoder pulses after contact with proximity dog. Direction for return to home position selectable. Home position shift amount and home position address settable. Automatic retreat on dog back to home position and automatic stroke retreat function.
	Data setting type	Returns to home position without dog. Sets any position as home position using manual operation, etc. Home position address settable.
	Stopper type	Returns to home position upon hitting end of stroke. Direction for return to home position selectable. Home position address settable.
	Home position ignorance	Position where servo-on (SON) is switched on is defined as home position. Home position address may be set.
	Dog type rear end reference	Home position return is made with respect to the rear end of a proximity dog. Home position address may be set. Home position shift value may be set. Home position return direction may be set. Automatic at-dog home position return, Automatic stroke return function
	Count type front end reference	Home position return is made with respect to the front end of a proximity dog. Home position address may be set. Home position shift value may be set. Home position return direction may be set. Automatic at-dog home position return, Automatic stroke return function
	Dog cradle type	Home position return is made with respect to the front end of a proximity dog by the first Z-phase pulse. Home position address may be set. Home position shift value may be set. Home position return direction may be set. Automatic at-dog home position return, Automatic stroke return function
	Dog type adjacent Z-phase reference	Returns to home position upon the Z-phase pulse right before a near-point dog with respect to the front end of a near-point dog. Direction for return to home position selectable. Home position shift amount and home position address settable. Automatic retreat on dog back to home position and automatic stroke retreat function.
	Dog type front end reference	Returns to home position to the front end of a point dog with respect to the front end of a near-point dog. Direction for return to home position selectable. Home position shift amount and home position address settable. Automatic retreat on dog back to home position and automatic stroke retreat function.
	Dog less Z-phase reference	Returns to home position to the first Z-phase pulse with respect to the first Z-phase pulse. Direction for return to home position selectable. Home position shift amount and home position address settable
	Dog type torque limit	Returns to home position upon Z-phase pulse count after passing through near-point dog. Direction for return to home position selectable. Home position shift amount and home position address settable. Automatic retreat on dog back to home position and automatic stroke retreat function. Torque limit settable.
	Data set type torque limit	Returns to home position without dog. Sets any position as home position by manual movement. Home position address and torque limit settable.
	Automatic positioning to home position function	High-speed automatic positioning to a defined home position

MR-J3-A Servo Amplifier Connections with Peripheral Equipment

Peripheral equipment is connected to the MR-J3-A as shown below. To ensure fast, efficient configuration and reliable operation

always use only the connecting cables, expansion options and other accessories supplied or recommended by Mitsubishi.

A complete overview with detailed specifications of all cables and accessories can be found in the next chapter.

MR-J3-B Servo Amplifier Connections with Peripheral Equipment

Peripheral equipment is connected to the MR-J3-B as shown below. Connectors, cables, options, and other necessary equipment are available so that users can set up MR-J3-B easily and begin using it right away.

Through its SSCNET III-compatible simple connections (optical fibre bus, 50 Mbps), the MR-J3-B series reduce wiring time and chances of wiring errors.

A complete overview with detailed specifications of all cables and accessories can be found in the next chapter.

MR-E Super Servo Amplifier Connections with Peripheral Equipment

Peripheral equipment is connected to the MR-E as shown below. To ensure fast, efficient configuration and reliable operation always use

only the connecting cables, expansion options and other accessories supplied or recommended by Mitsubishi.

A complete overview with detailed specifications of all cables and accessories can be found in the next chapter.

① Power supply

3~, 200–230 V AC
1~, 230 V AC for servo drives ≤ 750 W

② Regeneration unit (option)

This unit can be installed in situations involving frequent regeneration and large load inertia moments. For more details refer to the MR-E-□A/AG-QW003 Instruction manual.

③ Charge lamp

Lights up when the main power supply is on. **Power lines should not be plugged or unplugged when this lamp is on.**

Cables and Connectors for MR-J3-A Servo Amplifiers

Cables and Connectors for MR-J3-B Servo Amplifiers

Cables and Connectors for MR-J3-BSafety and MR-J3-D05

Cables and Connectors for MR-E-□A/AG-QW003 Servo Amplifiers

Cables and Connectors for MR-J3-T Servo Amplifiers

Cables and Connectors for Servo Motors

For HF-KE servo motor series: encoder cable length ≤ 10 m

Cables leading in the direction of the motor shaft

Cables leading in the opposite direction of the motor shaft

For HF-KE servo motor series: encoder cable length > 10 m

Cables leading in the direction of the motor shaft

Cables leading in the opposite direction of the motor shaft

For HF-KP/HF-MP servo motor series: encoder cable length ≤ 10 m

Cables leading in the direction of the motor shaft

Cables leading in the opposite direction of the motor shaft

For HF-KP/HF-MP servo motor series: encoder cable length > 10 m

Cables leading in the direction of the motor shaft

Cables leading in the opposite direction of the motor shaft

For HC-RP servo motor series

For HF-SE motor series

For HF-SP servo motor series

For HF-JP servo motor series ≤ 5 kW

For HF-JP servo motor series 11 kW and 15 kW

Cables and Connectors for Servo amplifier (general)

Notes:

- ① -H and -L indicate a bending life. -H indicates a long bending life, and -L indicates a standard bending life.
- ② The connector type terminal blocks are available for 200 V 3.5 kW or smaller and 400 V 2 kW or smaller servo amplifiers. For 200 V 5 kW or larger and 400 V 3.5 kW or larger, screw type connector blocks are used.
- ③ The HC-RP motors with brake don't have an additional connector for brake. The contacts for brake are inside the power connector.

For CN5	④⑤	USB cable 	Amplifier connector mini-B connector (5 pins) Personal computer connector A connector			MR-J3USBCBL3M Cable length: 3 m	—	3 m	160229

Notes:

- ① -H and -L indicate a bending life. -H indicates a long bending life, and -L indicates a standard bending life.
 ② The connector type terminal blocks are available for 200 V 3.5 kW or smaller and 400 V 2 kW or smaller servo amplifiers.
 For 200 V 5 kW or larger and 400 V 3.5 kW or larger, screw type connector blocks are used.

Cables and Connectors for Servo amplifier (type specific)

Note:

① Use this STO cable (MR-D05UDL3M-B) when connecting with a safety control device other than MR-J3-D05.

■ Buffer Battery

The servomotor's absolute value can be maintained by mounting the MR-J3BAT battery on the servo amplifier. The battery is not required when the servo system is used in incremental mode.

Battery	Application	Art. no.
MR-J3BAT	Buffering absolute positioning data	160224

■ Battery Connection Relay Cable

This relay cable is used to hold the absolute value if the servo amplifier has to be removed from a machine for shipping. The servo motor does not have a super capacitor (for holding an absolute value for short time) in the encoder. When this optional cable is used, the absolute value can be held even when the encoder cable is disconnected from the servo amplifier, making it easy to do maintenance on the servo amplifier.

Cable	Application	Art. no.
MR-J3BTCBL03M	Buffering absolute value	160327

■ Diagnostic Cable

This cable is required when using the amplifier diagnostic function of MR Configurator (Setup software).

Can be used only in combination with an MR-J3-A servo amplifier.

Cable	Application	Art. no.
MR-J3ACHECK	MR Configurator diagnostic function	161577

■ Terminal Blocks

These terminal blocks TB-20-EG/TB-26-EG/TB-50-EG are adapter modules that simplify the wiring of the inputs and outputs of the servo amplifiers.

In addition preconfigured system cabling is available for all of these terminal blocks.

Specifications	TB-20-EG	TB-26-EG	TB-50-EG
Terminal block type	Input/output block	Input/output block	Input/output block
Channels	8/16	26	50
Design	20 pin terminal module	26 pin terminal module	50 pin terminal module
Connection type	Screw terminals	Screw terminals	Screw terminals
Application	Servoamplifier MR-J3-B Extension I/O unit MR-J3-D01	Servoamplifier MR-ES/MR-J3-T	Servoamplifier MR-J3-A Motion controller MR-MQ100, Q170MCP Extension I/O unit MR-J3-D01
Dimensions (WxHxD) mm	75x45x52	73x81x58	102x81x80

Connection cables	MR-J3TBL-CN3-05M-EG; length 0.5 m; Art. no.: 212096, MR-J3TBL-CN3-1M-EG; length 1 m; Art. no.: 212095	MR-ESTBL-CN1-05M-EG; length 0.5 m; Art. no.: 215135 MR-ESTBL-CN1-1M-EG; length 1 m; Art. no.: 215137	MR-J2M-CN1TBL05M; length 0.5 m; Art. no.: 146794 MR-J2M-CN1TBL1M; length 1 m; Art. no.: 189864

Manual Pulse Generator

MR-HDP01

By this serial handwheel an external incremental setting value can be generated.

Specifications	MR-HDP01
Resolution	25 pls/rev (100 pls/rev at magnification of 4)
Output voltage	Input voltage > 1 V
Consumption current	Max. 60 mA
Weight	kg 0.4
Order information	Art. no. 128728

Parameter Unit

The parameter unit MR-PU03 with a 16 characters x 4 lines LCD display, is available as an option.

By connecting the parameter unit to the servo amplifier, data setting, test operation, parameter setting, etc. can be performed without using MR Configurator.

The parameter unit can be used with a MR-J3-□□□ servo amplifier.

Functions	MR-PU03
Parameter mode	Basic setting parameters, gain/filter parameters, extension setting parameters, input/output setting parameters
Monitor Mode	MR-J3-□□□ Current position, command position, command remaining distance, point table No., cumulative feedback pulses, droop pulses, regenerative load ratio, effective load ratio, peak load ratio, instantaneous torque, within one revolution position, ABS counter, servo motor speed, bus voltage, load inertia moment ratio
Diagnosis mode	External input/output display, motor information
Alarm mode	Current alarm, alarm history
Test operation mode	JOG operation, positioning operation, DO forced output, motor-less operation, single-step feed
Point table mode	Position data, servo motor speed, acceleration/deceleration time constant, dwell time, auxiliary function, M code
Order information	Art. no. 208805

Setup Software (MR Configurator)

The comfortable setup software for Windows based personal computers allows perfect tuning of the servo amplifiers and the connected servo motors.

The software makes it easy to read and write parameters, monitor, diagnose and test the servo system via a personal computer.

Functions	MR Configurator
Monitor	Batch display, input/output I/F display, high speed monitor, graph display
Parameters	Parameter setting, device setting, tuning, display of change list, display of detailed information, converter, parameter copy
Diagnostics	Rotation failure reason display, system information display, tuning data display, absolute data display, axis name setting, amplifier diagnostic
Alarms	Alarm display, alarm history, display of data that generated alarm
Test operations	JOG operation, positioning operation, operation without motor, forced digital output, program operation using simple language
Advanced function	Machine analyser, gain search, machine simulation
Others	Automatic operation, help display, project and data administration
Order information	Art. no. 217710

■ Noise Filters

For complying with the EMC directives of the European Community regarding the electromagnetic compatibility, the servo amplifiers have to be equipped with a noise filter across the input circuit. Additionally it has to be installed and wired according to the EMC directives.

The filter units are designed to reduce mains conducted RFI emissions to meet the European standard EN 61800-3.

More details are enclosed in the installation sheet of the MR-J3 filters.

Filter ^①	Servo amplifier	Power loss [W]	Rated current [A]	Leakage current ^② [mA]	Weight [kg]	Art. no.
MF-2F230-006.230MFa	MR-J3-10A/B/T–MR-J3-60A/B/T	10	6	< 26	0.45	189332

MF-3F480-050.230MF3	MR-J3-500A/B/T, MR-J3-700A/B/T and MR-J3-22KA4/B4/T4	40	50	< 4 ^②	4.0	203855
FMR-ES-3A-RS1-FP	MR-E-10A/AG-QW003–MR-E-20A/AG-QW003	1	3	< 3.5	0.32	219207
FMR-ES-6A-RS1-FP	MR-E-40A/AG-QW003–MR-E-70A/AG-QW003	4.4	6	< 3.5	0.37	219208
MF-3F230-011.230	MR-E-100A/AG-QW003–MR-E-200A/AG-QW003	8	11	< 6	1.0	221468

① All filters can provide conformity with the limits for environment 1, restricted distribution up to 50 m or environment 1, unrestricted distribution up to 20 m.

② At normal operation: voltage difference between 2 phases < 3 %/at fault occurrence (value in brackets) : 2 dead phases (worst case)

③ No foot print filter

■ Brake Resistors

If the regenerative power exceeds the power of the built-in resistor, the following listed optional brake resistors can be used.

Resistor	Servo amplifier	Power capacity [W]	Resistance (Ω)	Weight [kg]	Dimensions (WxHxD) [mm]	Art. no.
MR-RFH75-40	MR-J3-10A/B/T–MR-J3-60A/B/T, MR-J3-70A/B/T, MR-J3-100A/B/T and MR-E-10A/AG-QW003–MR-E-100A/AG-QW003	150	40	0.16	36x27x90	137279
MR-RFH220-40	MR-J3-70A/B/T and MR-J3-100A/B/T	400	40	0.42	36x27x200	137278
MR-RFH400-13	MR-J3-200A/B/T, MR-J3-350A/B/T, MR-J3-500A/B/T and MR-E-200A/AG-QW003	600	13	0.73	36x27x320	137277
MR-RFH400-6.7	MR-J3-700A/B/T	600	6.7	0.73	36x27x320	137275
MR-PWR-R T 400-120	MR-J3-60A4/B4/T4 and MR-J3-100A4/B4/T4	400	120	0.4	36x27x200	154746
MR-PWR-R T 600-47	MR-J3-200A4/B4/T4 and MR-J3-350A4/B4/T4	600	47	0.64	36x27x320	154751
MR-PWR-R T 600-26	MR-J3-500A4/B4/T4 and MR-J3-700A4/B4/T4	600	26	0.64	36x27x320	154752

Note: The MR-J3-11KA4/B4/T4–MR-J3-22KA4/B4/T4 have the external brake resistors included.

MELSEC FX Positioning Units

The high-speed counter and single axis positioning modules described below can be used in combination with the FX series PLCs. This

provides a cost effective solution for small servo/motion applications.

High speed counter and pulse train modules

These high speed modules provide additional counting and pulse train output features to the FX3U/FX3UC PLC. The high speed counters allow 1- or 2-phase pulses with counting speeds up to a maximum of 50 kHz for the FX2N-1HC and 200 kHz for the FX3U modules.

The FX3U-2HSY-ADP pulse train output module can provide pulse streams up to 200 kHz for use in basic positioning applications.

The MR-ES-A and MR-J3-A series amplifiers can be directly driven by these units.

Single-axis positioning module

The positioning modules FX2N-1PG-E and FX2N-10PG are extremely efficient single-axis positioning modules for controlling servo drives like MR-ES-A and MR-J3-A (by external controller) with a pulse train. It is very suitable for achieving accurate positioning in combination with the MELSEC FX series.

The configuration and allocation of the position data are carried out directly via the PLC program.

A very wide range of manual and automatic functions are available to the user.

Specifications	FX2N-1PG-E	FX2N-10PG
Accessible axes	1	1
Output frequency pulse/s	10–100 000	1–1 000 000
Signal level for digital inputs	24 V DC/40 mA	5 V DC/100 mA; 24 V DC/70 mA
Power supply	5 V DC 24 V DC	55 mA (from base unit) 120 mA (from base unit)
Related I/O points	8	8
Dimensions (WxHxD)	mm 43x90x87	43x90x87
Order information	Art. no. 65583	140113

SSCNET III module FX3U-20SSC-H

The SSCNET module FX3U-20SSC-H can be used in combination with a FX3U programmable controller to achieve a cost effective solution for high precision, high speed positioning. The plug-and-play fiber optic SSCNET III cabling reduces setup time and increases control distance for positioning operations in a wide range of applications.

Servo parameters and positioning information for the FX3U-20SSC-H are easily set up with an FX3U base unit and a personal computer. For parameter setting, monitoring and testing the easy programming software FX Configurator-FP is available.

For further specifications please refer to the MELSEC FX technical catalogue.

Specifications	FX3U-20SSC-H
Accessible axes	2 (independent or interpolation) via SSCNET III (MR-J3-B series servo amplifiers)
Output frequency	1 Hz to 50 MHz
Communications speed	50 Mbps
Starting time	ms 1.6 (+1.7 SSCNET cycle time)
Max. to PLC connectable modules	Up to 8 can be connected to the FX3U PLC
Power supply	5 V DC 24 V DC
Related I/O points	8
Dimensions (WxHxD)	mm 55x90x87
Order information	Art. no. 206189

Note: The FX3U-20SSC-H can only be used in combination with a FX3U series base unit. For applicable servo amplifiers and motors please refer to the MR-J3 servo section of this catalogue.

MELSEC System Q Positioning Units

The MELSEC System Q offers three different positioning module series for control of up to four axes:

- Open-collector output type (QD75P series)
- Differential output type (QD75D series)
- SSCNET III bus type (QD75MH series)

The open-collector and differential output controllers can be used with standard type servo amplifiers (MR-ES-A/MR-J3-A), whilst the QD75MH series controllers should be used with the MR-J3-B (SSCNET III bus type) Servo amplifiers. Using the SSCNET III system can provide much improved, easier to use positioning systems, with reduced wiring and better noise immunity.

All QD75 series positioning modules can provide functionality such as interpolation and speed-position operation etc.

The open-collector output type modules provide positioning with open loop control. The modules generate the travel command via the pulse chain. The speed is proportional to the pulse frequency and the distance travelled is proportional to the pulse length.

The differential output type modules are suitable for bridging long distances between the module and the drive system due to the fact that the output allows large motor cable lengths.

Specifications		QD75D1	QD75P1	QD75D2	QD75P2	QD75D4	QD75P4
Number of control axes		1	1	2	2	4	4

Single Axis Motion Controller MR-MQ100

The MR-MQ100 allows a single axis to be completely controlled and synchronised to a separate encoder or virtual axis with no additional controller hardware like a PLC. Applications such as rotary cutters, flying saws and labelling can be realized cost-effectively. A complete range of essential functions are available, including encoder and virtual axis synchronization, registration, point to point positioning and user defined cam profiles. In addition, the hardware complements these powerful software features with built-in I/O and SSCNET III motion networking capability as well as an Ethernet port. The MR-MQ100 uses Mitsubishi's simple but rugged optical fiber motion network SSCNET III. A single fiber connection is all that's needed to provide full communication and control over all functions of the MR-J3-B servo amplifier regardless of

capacity. A standard Ethernet connection is also provided to link the MR-MQ100 to the MT Developer2 software and to the control system.

- Stand-alone Motion Control System only with servo amplifier without additional hardware
- Optical high-speed SSCNET III network
- Ethernet interface 100/10 Mbps
- High speed inputs for mark sensors
- External encoder input for axis synchronisation
- MC protocol Ethernet communication
- Extension I/O unit MR-J3-D01 can be connected to the MR-J3-BSafety amplifier series to increase the number of in- and outputs
- Integrated serial interface (RS422) for communication with HMI

Items		MR-MQ100
Power supply		24 V DC $\pm 10\%$ (required current capacity: 400 mA)
Digital inputs (mark sensors)		4 inputs (24 V DC)
Digital outputs		2 outputs (24 V DC)
Synchronous encoder	signal type	A/B phase pulse train input
	voltage input/open-collector type (5 V DC)	Up to 800 kpps (after magnification by 4), up to 10 m
	differential input type	Up to 4 Mpps (after magnification by 4), up to 30 m
Peripheral interface		100 Mbps/10 Mbps Ethernet (for programming and additional options) SSCNET III (for connection to MR-J3-B series servo amplifier with optical cable)
Positioning	method	(PTP (Point to Point) control, Speed control/Speed-position control, Fixed-pitch feed, Constant speed control, Position follow-up control, Speed control with fixed position stop, Speed switching control, High-speed oscillation control, Synchronous control (SV22))
	acceleration/deceleration control	Automatic trapezoidal acceleration/deceleration, S-curve acceleration/deceleration
	compensation	Backlash compensation, Electronic gear, Phase compensation
Servo program capacity		16 k steps
Number of positioning points		3200
Number of control axis		1 axis
Operation cycle		0.44 ms
Servo amplifier		MR-J3-B servo amplifier (over SSCNET III)
Programming language		Motion SFC, dedicated instruction, mechanical support language (SV22)
Memory back up (included)		Q6BAT
Cam function	number of cams	Up to 256 cam profiles may be stored internally.
	resolution per cycle	256, 512, 1024, 2048
	stroke resolution	32767
	control mode	Two-way cam, feed cam
Weight [kg]		0.7
Dimensions (WxHxD)		mm 30x168x135 ^①

■ Stand-Alone Motion-Controller Q170MCPU

The Q170MCPU combines a PLC CPU, a Motion CPU and a power supply module into one compact unit. No base unit is required, although an extension base unit with standard PLC modules can be connected if required. An encoder interface is included as standard, enabling multiple axis synchronization with an external encoder.

The well-reputed mechanical support language (SV13, SV22) from the System Q Motion Controller is incorporated.

- Small size
- Controls up to 16 axes
- Communication with the MR-J3-B series servo amplifier via high-speed network SSCNET III and a communication speed up to 50 Mbps.
- Programming and configuration is performed using the familiar software GX (IEC) Developer und MT Developer2.
- Expandable with an extension base unit (up to 5 slots) and I/O modules, intelligent modules, and network-related modules.
- MC protocol Ethernet communication

Specifications		Q170MCPU
Motion-CPU	number of controllable axes	16
	operation cycle (using SV13)	0.44 ms (1st to 6th axis), 0.88 ms (7th to 16th axis)
	acceleration/deceleration system	Trapezoidal, S-curve
	programming languages	Motion SFC, dedicated instruction, mechanical support language (SV22)
	servo program capacity	16 k steps
	interfaces	Ethernet 100 Mbps/10 Mbps (for programming and additional options) SSCNET III (for connection to MR-J3-B series servo amplifier with optical cable) USB, RS232
Interpolation functions		Linear interpolation for up to 4 axes, circular interpolation for 2 axes, helical interpolation for 3 axes
PLC CPU	number of I/O points	512 (Maximum of 320 points is available with modules on extension base unit)
	programming languages	Ladder, instruction list, SFC, structured text
	program capacity	20 k steps
	processing speed	0.02 μs (LD-Anweisung); 0.04 μs (MOV-Anweisung)
	total number of instructions	764 (including real number operation instruction)
Positioning	method	(PTP (Point to Point) control, Speed control/Speed-position control, Fixed-pitch feed, Constant speed control, Position follow-up control, Speed control with fixed position stop, Speed switching control, High-speed oscillation control, Synchronous control (SV22))
	acceleration/deceleration control	Automatic trapezoidal acceleration/deceleration, S-curve acceleration/deceleration
	compensation	Backlash compensation, Electronic gear, Phase compensation
Memory card interface		1 slot for memory card for MELSEC System Q
Cam function	number of cams	Up to 256 cam profiles may be stored internally.
	resolution per cycle	256, 512, 1024, 2048
	stroke resolution	32767
	control mode	Two-way cam, feed cam

MELSEC System Q Motion CPUs

The Q-Motion controller CPU controls and synchronises the connected servo amplifiers and servo motors. A motion system besides the controller CPU, also includes a PLC CPU. Only after combining a highly dynamic positioning control CPU and a PLC, an innovative motion control system is created.

While the Motion CPU controls large-scale servo movements the PLC CPU is responsible for the machine control and the communication.

- Using multiple CPUs to distribute the load improves the overall performance of the whole system
- Use of up to 3 motion CPUs within one system
- Large scale control system for up to 96 axes per system
- Interpolation of 4 axes simultaneously
- Electronic cam control
- Virtual and real master axes
- Integration in the high-speed SSCNET network for communication with high-performance MR-J3-B servo amplifiers at up to 50 Mbps

Specifications		Q172HCPU	Q173HCPU	Q172DCPU	Q173DCPU
Type		Motion CPU	Motion CPU	Motion-CPU	Motion-CPU
I/O points		8192	8192	8192	8192
No. of control axes		8	32	8	32
Interpolation functions		Linear interpolation for up to 4 axes, circular interpolation for 2 axes, helical interpolation for 3 axes			
Positioning	method	PTP (point to point), speed control/speed-position control, fixed pitch feed, constant speed control, position follow-up control, speed switching control, high-speed oscillation control, synchronous control (SV22)			
	acceleration/ deceleration control	Automatic trapezoidal acceleration/deceleration, S-curve acceleration/deceleration			
	compensation	Backlash compensation, electronic gear			
Programming language		Motion SFC, dedicated instructions, software for conveyor assembly (SV13), virtual mechanical support language (SV22)			
Servo program capacity		16 k steps			
No. of positioning points		3200			
Interfaces		USB, RS232C, SSCNET III		SSCNET III (USB, RS232C via PLC-CPU)	SSCNET III (USB, RS232C via PLC-CPU)
Real I/O points (PX/PY)		256 (these I/Os can be allocated directly to the motion CPU)			
Dimensions (WxHxD)	mm	27.4x98x114.3	27.4x98x114.3	27.4x98x119.3	27.4x98x119.3

MELSEC System Q Motion System Modules

Servo external signals interface module Q172LX/Q172DLX

The Q172LX/Q172DLX input module is used in conjunction with a Q Motion CPU to capture external servo signals.

Up to 8 axes can be evaluated per module. In this way, proximity dog sensor, upper/lower limit switch, stop signal input and operating mode switching input can be easily incorporated into the system.

- 32 address points for 8 axes for each 4 inputs
- Bipolar inputs for positive and negative logic
- Galvanic isolation of the inputs by means of photocoupler
- Shortest response time of < 0.4 ms
- Modular extension possible

Serial absolute synchronous encoder interface module Q172EX-S2/Q172DEX

The serial absolute synchronous encoder interface module Q172EX-S2/Q172DEX is a Motion system module for receiving and evaluating up to two serial absolute-value encoders (Incremental encoders cannot be connected). Via an external encoder (Q170ENC) it is possible to feed a setpoint source to the Motion system, which in turn is programmed as a master axis.

In addition to the interfaces for the signals of two absolute-value encoders, the Q172EX-S2/Q172DEX has two digital inputs with ultra-rapid responsetimes.

- Transfer rate of 2.5 Mbit per second
- Resolution of 18 Bit with Q170ENC
- Voltage-failure security of the absolute values by means of built-in buffer battery
- Shortest response times of < 0.4 ms
- Modular extension possible

Manual pulse generator interface module Q173PX/Q173DPX

The Manual pulse generator interface module Q173PX is used in a Motion system to receive the signals of up to 3 external incremental encoders or manual impulse generators (hand wheels).

In addition to the inputs for the encoders, the Q173PX/Q173DPX has three digital inputs with which the encoder signal counting procedure can be started (Encoder start signal).

- Bipolar inputs for positive and negative logic
- Galvanic isolation of the inputs by means of photo coupler
- Shortest response times of < 0.4 ms
- Modular extension possible

■ Configuration of a SSCNET III System

X-Y Table System Configurations

An X-Y table is a typical two axes servo application, commonly used in industry for pick and place systems such as PCB component insertion machines through to welding machines.

The following information provides two examples of possible X-Y table system configurations, using Mitsubishi automation equipment.

The first is a FX3G-24MT/ESS based system and the second is a more complex interpolating QD75MH (SSCNET III) based system.

System 1: FX3G PLC based system

Products	Function
FX3G-24MT/ESS	PLC with integrated positioning control
MR-E-10A-QW003	Servo Amplifier
HF-KE13W1-S100	Motor
MR-E-70A-QW003	Servo Amplifier
HF-SE52KW1-S100	Motor

The FX3G is a compact PLC for comprehensive machine control. It combines the functions of a PLC with positioning functions. In this configuration the FX3G-24MT/ESS is used to control the X and Y axes. Via the transistor open collector outputs the PLC provides the Servo amplifiers of the MR-ES-A Series with pulse train signals for controlling the two axes. The setting of the system can be done with the GX Developer. GX Developer has a special section for the general positioning parameter setup and for the setup of each positioning command in a easy to use table. This table for each axis can contain 100 instructions with the frequency and

number of pulses stored in the user data area and can be manipulated and uploaded for setting into operation of the machine.

For expanding the system, the FX3G is also connectable to the majority of existing FX2N and FX3U Special Function Blocs.

- User friendly positioning
- Easy setting in GX Developer
- Cost effective
- Simple functionality

System 2: QD75MH based system

Products	Function
Q00J	Q PLC
QD75-MH2	Positioning Controller
MR-J3-10B	Servo Amplifier
HF-KP13	Motor
MR-J3-40B	Servo Amplifier
HF-SP52	Motor
MR-BAT	Servo Amplifier Battery

The QD75MH based system uses the powerful modular Qn PLC Series, providing greater functionality and expandability options. The QD75MH system is connected using SSCNET III (Servo System Controller Network), which is Mitsubishi's dedicated motion control network. SSCNET III simplifies the set-up of the system and reduces the wiring required. SSCNET III systems are created by simply plugging an amplifier into the main controller (QD75MH) and then "daisy-chaining" each additional axis that is added. SSCNET III connectivity requires MR-J3-B type amplifiers to be used.

Furthermore, as the Servo amplifiers are connected by a bus system, all Servo data, such as current position, torque etc. can all be monitored back at the main controller (Q00J PLC) as the data is automatically updated on the QD75MH module.

Also, all of the internal Servo parameters can be set from the PLC, again due to the bus system used.

The bus system also means that position data is sent serially, therefore reducing any possible interference due to noise.

Finally, as both axes are controlled from one high function module (QD75MH), interpolation between the two axes is possible.

- SSCNET III capability
- Easy of set-up
- High functionality
- Expandability
- Module Options
- Reduced Wiring

X-Y table control

A world of automation solutions

Mitsubishi offer a wide range of automation equipment from PLCs and HMIs to CNC and EDM machines

A name to trust

Since its beginnings in 1870, some 45 companies use the Mitsubishi name, covering a spectrum of finance, commerce and industry.

The Mitsubishi brand name is recognized around the world as a symbol of premium quality.

Mitsubishi Electric Corporation represents space development, transportation, semiconductors, energy systems, communications and information processing, audio visual equipment, home electronics, building and energy management and automation systems, and has 237 factories and laboratories worldwide in over 121 countries.

This is why you can rely on a Mitsubishi automation solution – because we know first hand about the need for reliable, efficient, easy-to-use automation and control.

As one of the world's leading companies with a global turnover of 4 trillion Yen (approximately \$40 billion), employing over 100,000 people, Mitsubishi Electric has the resource and the commitment to deliver the ultimate in service and support as well as the best products.

Global partner. Local friend.
